

VISCOLUB PT

Everything runs smoothly.

Areas of application / Temperatures

Sleeves and pipes

Application temperature -10 °C to +60 °C
water soluble

Processing information

Clean the inside of the sleeve and carefully insert the sealing ring / Spread the end of the pipe and the sealing ring with sufficient lubricant and push into each other / Thoroughly rinse the pipe before use

Tests

Tested in accordance with DVGW VP 641

Contents

Tube 250 g
other containers on request

Storage

Ideal storage temperature +5 to +25 °C
store in a dry place

Creamy white lubricant with excellent lubricating action for use in plastic spigot-and-socket pipes.

Environmentally friendly

The biodegradable lubricant is highly compatible with PE and PVC plastics. Suitable for all drainage applications.

No friction

Makes it easy to screw in and reduces frictional resistance to a minimum – the material is protected during installation.

Does not dry out

Remains flexible and retains its lubricating properties even at high temperatures and for prolonged processing periods.
